Subject: [redacted] Proposal [redacted] and letter
dated 8 April 1963

Dear John:

This letter proposal with attached cost analysis forms a revision to our proposal [redacted] dated 8 April 1963 reflecting the increase in format to 4" x 5" with a minimum measurable area of 4-1/4" x 4-1/4". All references to 3" x 3" format in our proposal are now changed to 4-1/4" x 4-1/4".

STAT

Because of the larger format it is necessary to alter the projection illumination design to the format stage with assurance that it will remain cool without any hot spots. To further guarantee this we will add two traveling cold reflecting mirrors located on the X and Y axis stages.

We will endeavor to maintain the overall size of the console and the instrument within present boundaries. In the event that this complicates the design unnecessarily, we'll assume the instrument to increase in size by 2 inches in length and 2 inches in width.

All other parts of our proposal remain unchanged.

The total cost of revised Item 1, Stereo Chip Comparator, is [redacted] Item 2, Console for Stereo Chip Comparator and Digitizer components, [redacted] cost unchanged.
